[3.12] InorganicWasteTreatment (WS.4)

Example of Inorganic Waste Treatment at Andijan State Institute of Foreign Languages

Description:

Andijan State Institute of Foreign Languages carries out inorganic waste treatment activities to support proper waste management and recycling on campus. Inorganic waste generated at the institute mainly includes paper, cardboard, plastic bottles, plastic packaging, metal items, and other non-organic materials produced through educational, administrative, and daily campus activities.

To manage inorganic waste more effectively, the institute uses labeled waste bins for separate collection of recyclable materials. Paper, cardboard, and plastic waste are collected separately in designated areas and prepared for further recycling. Awareness posters and visual instructions are displayed on campus to encourage students, teachers, and administrative staff to sort waste correctly and avoid mixing recyclable materials with general waste.

The institute also collects used books, old paper materials, cardboard boxes, and plastic items from departments, classrooms, offices, and public areas. These materials are sorted and transferred to relevant recycling organizations for further processing. This practice helps reduce the amount of waste sent to landfills and supports the reuse and recycling of inorganic materials.

The inorganic waste treatment program at Andijan State Institute of Foreign Languages contributes to cleaner campus management, improved waste segregation, reduced environmental impact, and the development of sustainable habits among the institute community.
